*Behavioral Weight Management for Pregnant and Postpartum Women in the Military*

This randomized controlled trial will determine whether a gestational weight gain intervention, a postpartum weight loss intervention, or a combination of the two interventions is most beneficial in improving postpartum weight loss, maternal/child health, and military readiness in a sample of active duty military women.

Role: Principal Investigator

R01 DK107747 Krukowski (PI) 09/01/16-7/31/21 3 calendar

*Efficacy of Two Novel Behavioral Post Cessation Weight Gain Interventions*

We will determine whether a weight stability intervention (based on the evidence-based Stability Skills First intervention) or a weight loss intervention (based on the evidence-based Look AHEAD intensive lifestyle intervention) followed by a smoking cessation intervention are more efficacious for reducing postcessation weight gain at 12 month follow-up, compared to a bibliotherapy condition prior to cessation.
